CNERGEE DATAGUARD

India's Most Advanced Next Generation Firewall

Simplicity | Security | Sovereignty

Dataguard

Overview

Cnergee's DATAGUARD represents a new class of Next Generation Firewall built on a Make-in-India foundation—crafted for organizations that demand high performance, deep visibility, and uncompromising security.

Powered by **Snort 3 IDS/IPS** and integrated **Threat Intelligence,** it provides end-to-end protection from network edge to application layer, ensuring every packet is analyzed, every session secured, and every threat neutralized.

Core Security Features

- **URL & Domain Filtering**

  Block malicious or non-compliant websites before they reach your users. Define policies by domain, subdomain, or exact URLs to ensure safe and productive internet use.

- **Content & Category Filtering**

  Use advanced deep packet inspection to classify and control web content by type or business category. Protect your network from harmful, nappropriate, or bandwidth heavy content.

- **Application Visibility & Control**

  Detect and manage thousands of cloud and on-premise applications with granular policy enforcement and bandwidth optimization. Control access to over 3,000+ applications with granular visibility. Block risky or shadow IT applications and prioritize business-critical traffic.

- **Layer 7 Deep Packet Inspection**

  Context-aware traffic analysis identifies threats and enforces policies at the application layer for complete visibility.

- **Intrusion Detection & Prevention (IDS/IPS)**

  Powered by Snort 3, DATAGUARD offers real-time protection from exploits, malware, and command-and-control attacks. Continuous signatureupdates ensure evolving defense against zero-day threats.

- **SSL/TLS Decryption & Inspection**

  Safely inspect encrypted traffic without compromising performance detecting hidden threats inside SSL/TLS sessions.

- **Threat Intelligence Integration**

  Stay ahead of global attack patterns with live feeds from trusted threat intel sources. Dynamic blacklists, malicious IP reputation scoring, and anomaly detection keep your network resilient.

- **Gateway Antivirus**

  Multi-engine scanning at the gateway level protects against ransomware, trojans, worms, and viruses before they enter your LAN. Automatic updates ensure always-on protection.

Advanced Capabilities

- **Network Data Loss Prevention (DLP)**

  Monitor and prevent unauthorized transmission of sensitive data such as financials, credentials, or customer records. Configurable policies safeguard compliance with India's emerging data protection norms.

- **Remote Browser Isolation (RBI)**

  Safely browse untrusted or external websites through isolated browser sessions—keeping potential malware off user endpoints. Delivers a seamless user experience with zero compromise on security.

Performance & Management

- **PMTA Technology:** Packet-based Multi-Session Tunnel Aggregation ensures performance with reliability.
- **Centralized Dashboard:** Unified policy management, logs, and analytics through intuitive web UI.
- **Scalable Architecture:** Ideal for enterprises, government networks, and distributed sites.
- **OPEX-friendly Model:** Offered on subscription-based pricing with local support and updates.

Why Choose Cnergee

- 100% **Make-in-India** security stack built for Indian regulatory environments.
- Unified Platform: Firewall, SD-WAN, CASB, DLP, RBI, and Zero Trust in one console
- Integrated suite across **SD-WAN, Firewall, and Managed Wi-Fi.**
- AI-Powered Defense: Adaptive learning for evolving cyber threats.
- Trusted by enterprises and government bodies for mission-critical security

Secure Your Network. Empower Your Enterprise.
